FREE GUIDE

Build your own *link-in-bio* page

The exact steps I took to make mine with Claude, so you can copy them.

Kat · @katfiguresitout

I'm learning Claude + Instagram from zero, in public.
Follow along on Instagram for one small thing I try each week.

No coding needed. Free to host. About an hour, coffee breaks included.

BEFORE WE START

Hi, Bestie! Let's do this together.

So you need a link in your bio. Me too.

I'm learning Claude and Instagram marketing from zero, same as you. When I needed a link-in-bio page, I asked Claude to build one for me. It's now live, it costs me nothing, and it looks like it belongs to me.

This guide is every step I took. I wrote it the way I'd explain it to you over coffee, mistakes included.

Every week I try one small thing with Claude and share it on Instagram with the real prompt. This guide is one of those things, written down.

By the end you'll have a one-page website with your photo, a short bio, big buttons to your stuff, and your own colors.

> HONEST NOTE
>
> If you just want a link up in five minutes, Linktree or Beacons is completely fine. Do it my way if you want the page to look like you, and you're a little curious how websites work.

What you need

🤖 A Claude account (the free one is enough)

🐙 A free GitHub account (this is where your page will live)

🖼️ Your profile photo

🔗 The links you want people to tap

STEP 1

1. Decide what goes on it

Do this part on paper first. Someone tapping your bio link wants one thing, so make that one thing easy to find. I kept mine to four buttons.

Here's what's on mine:

👋 New here? Start with my Reels
My main link. It's dark so it's the first thing you see.

📝 10 Claude prompts for new creators — SOON
A free PDF that isn't ready yet

📖 The beginner's guide to Claude for creators — LATER
My paid guide, for later

💬 Tell me what to learn next
Opens my Instagram DMs

Under those, I have a row of small buttons for my other accounts (Threads, TikTok, and so on).

> **LITTLE TRICK**
>
> You can put things on your page that don't exist yet. A "Soon" card tells people something is coming. When it's ready, you swap it for a real link.

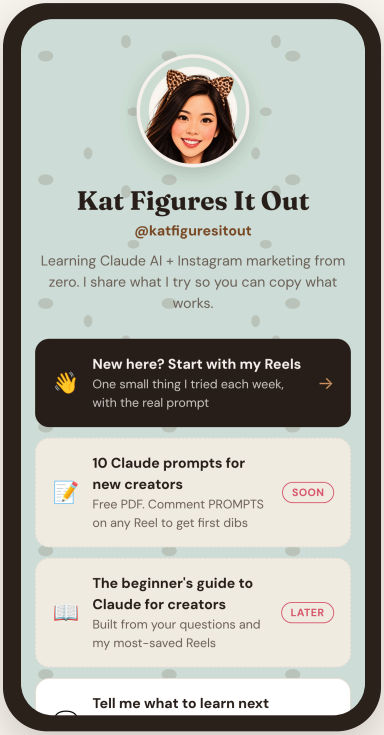

My main link (the one thing I want people to tap):

Two or three more:

STEP 2

2. Steal colors from your photo

This is the easiest way to make your page feel like you. My profile photo is a painted portrait of me wearing leopard-print cat ears, so I pulled my colors straight from it.

- Sage, for the background `#cfe0d7`
- Cream `#f8f4ee`
- Brown `#7a4a26`
- Pink, for the "Soon" labels `#d9566b`
- Dark brown, for text and my main button `#2b211b`

The faint leopard spots in the background come from the cat ears. Now my page, my Reels and my profile photo all match.

DON'T KNOW COLOR CODES?

Me neither. Upload your photo to Claude and ask: *"Pick 4 or 5 colors from this photo for a website, and tell me the codes."* Do the same for fonts. Mine are Fraunces for my name and DM Sans for everything else, both free from Google Fonts.

STEP 3

3. Ask Claude to build it

Open a new chat in Claude, attach your profile photo, and paste this. Swap everything in **[brackets]** for your own details.

COPY THIS PROMPT

```
Build me a link-in-bio page as one HTML file I can host for
free on GitHub Pages.

About me: I'm [name], [@handle] on Instagram. I make content
about [topic] for [who].

At the top: my photo (file name: me.jpg), my name, my handle,
and this bio: "[your bio]"

Then these links as big buttons that are easy to tap on a
phone:
1. [title]: [link] (make this one stand out)
2. [title]: [link]
3. [title]: [link]

Under that, small buttons for my other accounts: [links]

Colors: take them from the photo I attached. [Optional: add a
pattern, like faint leopard spots.]

Make it look good on phones and in dark mode. Keep it to one
file, and add short notes inside the code so I know where to
change my links later.
```

Claude will give you the code. Download it and save it as **index.html**. Keep that name exactly, because it's the file a website opens first.

Rename your photo to **me.jpg** too, and put both files in the same folder.

STEP 4

4. Tweak it until it feels like you

Double-click index.html. It opens in your browser, so you can see your page before anyone else does.

Don't like something? Tell Claude in normal words, the way you'd tell a friend. Things I'd ask:

"Make the first button darker so it stands out more."

"Add faint leopard spots to the background."

"Put a small 'Soon' label on the free PDF card."

"The photo is too small. Make it bigger and round."

"Show me which lines to change when I want to edit a link."

Each time, download the new version and replace your old index.html.

Before you move on, check:

- It looks right on your phone, not only your laptop
- It still looks okay with your phone in dark mode
- Every single button opens the right place

MY OOPS

My TikTok handle has a dot in it (@kat.figuresitout), and my other handles don't. I had to fix the TikTok link after my page was already live. So yes, tap every button. All of them.

STEP 5

5. Put it online for free

We're using GitHub Pages. GitHub sounds scary and techy, but for this you only need to click a few buttons.

1. Sign up at **github.com**. Your username becomes part of your link, so pick one you like.
2. Click the **+** at the top right, then **New repository**. A repository is just a folder for your site. Give it a short name (mine is **katfiguresitout**), set it to **Public**, and click **Create repository**.
3. On the next screen, click **uploading an existing file**. Drag in index.html and me.jpg, then click **Commit changes**. (Commit just means save.)
4. Go to **Settings** → **Pages**. Under "Build and deployment", set Source to **Deploy from a branch**, pick **main** and **/ (root)**, then click **Save**.
5. Wait a minute or two and refresh. Your link shows up at the top of that page. It looks like this:
   `https://yourusername.github.io/your-folder-name/`

Mine is `deliberatelygood.github.io/katfiguresitout` (go have a look).

> IF YOUR PHOTO DOESN'T SHOW
>
> Check the file name. It has to match the code exactly, capital letters included. "Me.JPG" and "me.jpg" are different files to a website.

STEP 6

6. Add it to your bio

On Instagram

1. Go to your profile and tap **Edit profile**.
2. Tap **Links**, then **Add external link**.
3. Paste your page link, give it a title, and tap **Done**.

Threads, TikTok and YouTube each have their own link spot in the profile settings. TikTok doesn't show the bio link option to every account, so don't worry if you can't find it yet.

Changing things later

You'll update this page more than you think. Here's how:

1. Open your repository on GitHub and click **index.html**.
2. Click the pencil icon to edit.
3. Change the words or the link, then click **Commit changes**.

Your live page updates by itself in a minute or two.

If the code makes your head spin, paste the whole file into Claude, say what you want changed, and upload the new version the same way you did in Step 5.

> WHAT I'LL DO NEXT
>
> When my free prompt PDF is ready, I'll come back here and turn that "Soon" card into a real button.

YOUR CHECKLIST

Tick these off as you go

- [ ] I picked one main link and two or three more
- [ ] I chose my colors from my profile photo
- [ ] I asked Claude to build the page and saved it as index.html
- [ ] My photo is in the same folder, with the same name as in the code
- [ ] I checked it on my phone and in dark mode
- [ ] I tapped every single button
- [ ] I uploaded it to GitHub and turned on Pages
- [ ] I pasted my new link into my Instagram bio

That's it. You have a website now.

If you build one, send it to me. I really want to see it. And if you got stuck somewhere, tell me where, because that's probably my next Reel.

Follow me on Instagram @katfiguresitout

One small thing I try with Claude each week, with the real prompt, flops included. Let's keep figuring it out together.
